**Unless stipulated otherwise in the contract**, the following minimal requirements are part of this agreement:

- All production (and any backline) must be adequately powered, set-up and functional by Artist load-in.
- Artist requires no back-line equipment and WILL NOT use back-line if they choose not to.
- Artist will not share any equipment with other acts on the bill, unless arrangements are made in advance with Tour Manager. If Artist is headlining, Artist WILL NOT strike any gear from the stage, and WILL NOT move equipment if they deem it to be problematic or unnecessary.
- Artist typically requires four (4) hours from load-in until doors open to set up the show. Please ensure that they have access to the stage from load-in time, and that the stage is clear of clutter.
- Artist requests two (2) sober and competent helpers (these may be house techs) to assist with load-in and load-out, building the stage set-up and light show and patching Artist's sound reinforcement into the house system.
- Artist provides an X32 monitor console and a 32 channel split to front-of-house (FOH) and all mics and DI boxes. They will need to use house cables and stands.
- Artist typically has their own FOH engineer to run sound, but if house techs are needed, they request that vocal mics never be muted or turned down below an audible level, and that no effects other than standard reverb or low level, short tail delay be used. Minimal gating and EQ is preferred.
- Artist requires a full sound check of at least 40 minutes following load-in and stage set-up.
- Artist will record the show from the FOH position, and requires a LR feed from the FOH for this purpose and for streaming.
- The minimum size stage deck for the Artist's performance shall be at least 15' wide by 12' deep with one 8' wide x 6' deep x 6"-12" high drum riser if available. The ideal stage size is 20' x 20', with a 2' minimal elevation and an 8' wide x 6' deep x 12" high drum riser. The stage and drum riser shall be of sturdy construction; flat, level and free of tripping hazards. The stage deck and sub-structure shall not have sag or bounce that would cause amplifiers, speaker stacks or lighting rigs to lean or sway. Preferred stage elevation is to be a minimum of 24" above surrounding floor or grade. If the stage is not a permanent part of the venue, a loading ramp and an adequate set of stairs, both of safe and sturdy construction, should be provided. Outdoor stages should be properly covered to protect Artist and all equipment from the elements.

**Sound Reinforcement-** Please ensure that every effort has been made to provide the following:

**House Sound Speakers-** Buyer must supply a full, professional quality stereo sound system capable of producing average of 105 dB SPL for every seat in the audience. This should consist of a typical three (3) or four (4) way speaker system with all necessary amplifiers, crossovers, and processing. There must be a 32-band graphic equalizer on the house main sends. Preferred speakers: Meyer, d&b, JBL, EAW.

**Front-of-House Console-** Buyer must supply a pro quality, fully functional console that can accommodate at least twenty (20) channels. Preferred consoles are: Midas, Crest, Soundcraft, and Allen & Heath. Each input channel must be capable of 3-band sweepable equalization with delay and reverb for lead vocal.

**Monitors-** Please speak with Tour Manager to discuss Monitor details.

-A separate monitor console is preferred, but monitors may be mixed at FOH position.

-There must be (4) separate monitor mixes with a graphic equalizer for each mix, or a minimum of (6) monitor mixes (ideally 7...) if Artist is touring with horns.

-Please provide a subwoofer and wedge for the drum monitor that can handle high levels of kick and low end sound levels.

**If this is an outdoor performance, shielding from the elements (rain and sun) must be provided.**

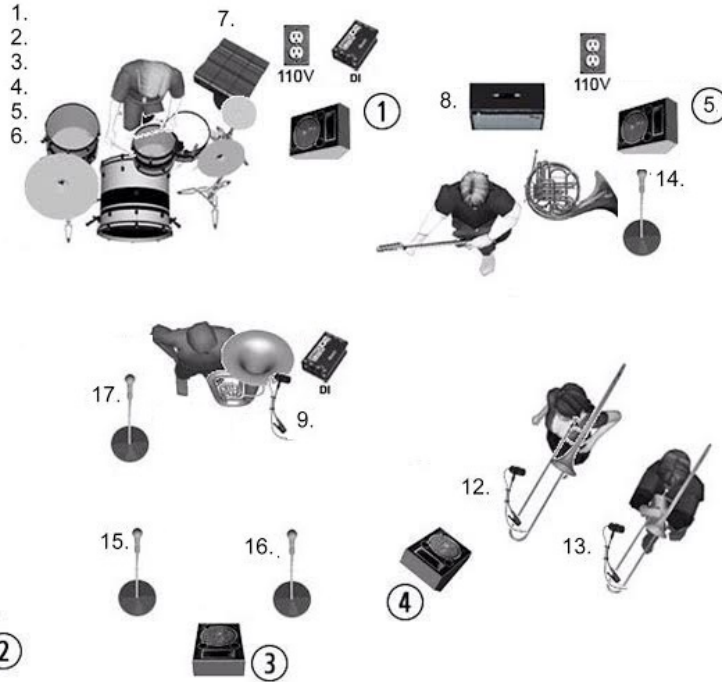

**Lighting-** Artist will utilize the venue's house lighting, as long as there is a basic color stage wash (red and blue) and the cans are able to be re-focused according to the stage plot. If the house lights are not controlled from the by the house engineer, there will need to be a lighting director available from 30 minutes prior to doors until the conclusion of the event to operate the house lights. Ideally, there will be spots and spot operator(s).
